** = Bulls that ain't got values for Calving ease yet, young bulls.

BLUP-breeding values - November 2011

D = Direct quality:

Birth D = Birth weight direct effect

200 d. D = the calves growth until weaning

365 d. D = the animals growth from weaning to 365 days weight

Total = Directly effect for the animals growth from birth to 365 days weight

M = Maternally quality:

Birth M = Maternally value for birth weight (Sirs/cows daughters ability to give a large calf)

200 d. M = Maternally value for growth until weaning (Sirs/cows daughters ability to give a high weaning weight)

Breeding values over 100 means that the animal genetics has higher weights than the average for the breed. That's positive for growth value, but negative for birth weight value.
